

PYRECON

Advanced Network Security Assessment Report

Generated: 2026-06-04 19:43:10.336809

Framework: PYRECON v2.0

Assessment Type: Vulnerability Assessment

Executive Summary

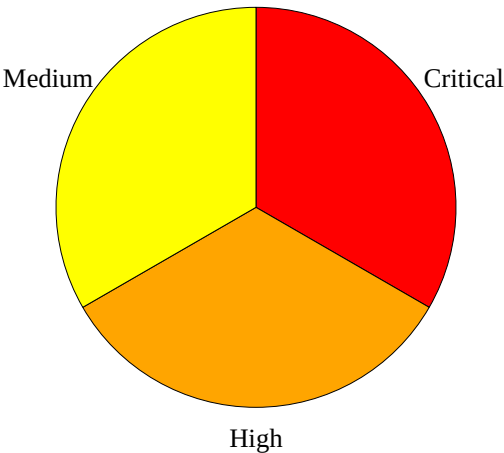

This report presents the results of the security assessment conducted using the PYRECON Cybersecurity Framework. The assessment identified **3** open ports and several vulnerabilities including critical CVEs affecting exposed services. The overall security posture of the target is classified as: **MEDIUM RISK**

Security Score

52/100

Overall Rating: **MEDIUM RISK**

Risk Distribution

Scan Summary

Metric	Value
Total Open Ports	3
Critical Risks	1

High Risks	1
Medium Risks	1
Low Risks	0
Security Score	52/100

Detailed Vulnerability Analysis

Port	Service	Risk	CVE	Vulnerability
22	SSH	MEDIUM	CVE-2018-15473	OpenSSH User Enumeration
80	HTTP	HIGH	CVE-2021-41773	Apache Path Traversal
443	HTTPS	CRITICAL	CVE-2014-0160	Heartbleed OpenSSL

Security Recommendations

- Apply latest security patches immediately.
- Disable unused services and ports.
- Replace insecure protocols such as Telnet.
- Implement firewall filtering rules.
- Enable IDS/IPS monitoring systems.
- Use strong authentication mechanisms.
- Regularly monitor network activity.

Conclusion

The assessment identified multiple vulnerabilities affecting the target system. The environment is currently classified as **MEDIUM RISK**. Immediate remediation actions are strongly recommended to improve the overall security posture.
